X-RADIATION LIMIT

X-radiation limit curves, at a constant anode current of 250 μ A, measured according to TEPAC103A.

0,5 mR/h isoexposure-rate limit curves, measured according to TEPAC103A.

FLASHOVER PROTECTION

With the high voltage used with this tube internal flashovers may occur. These may destroy the cathode of the tube. Therefore it is necessary to provide protective circuits, using spark gaps. The spark gaps must be connected as follows:

No other connections between the outer conductive coating and the chassis are permissible.
