## Maximum Circuit Value

Grid-No.1 Circuit Resistance . . . . .	500 $\Omega$
--	--------------

<sup>a</sup> Because the filament voltage, when operated near the maximum value, provides emission in excess of any requirements within tube ratings, during life the filament voltage should be reduced to a value that will give adequate but not excessive emission. Careful attention to maintaining the value consistent with adequate emission will result in conserving the life of the tube. The filament voltage should be measured at the respective liquid coolant connections on the tube side of the threads. This procedure is essential for accurate measurement of the filament voltage. At 400 cycles some heating of the filament leads and rf cathode terminal (cathode heater) occurs; this condition is not detrimental to tube operation or tube life.

<sup>b</sup> Measured directly across cooled element for the indicated typical flow.

<sup>c</sup> This pressure is related to the output-cavity pressurization as required to prevent corona or external arc-over.

<sup>d</sup> The magnitude of any spike on the plate voltage pulse should not exceed its peak value by more than 4000 volts, and the duration of any spike when measured at the peak-value level should not exceed 10% of the maximum "ON" time. The output cavity must be pressurized as required to prevent corona or external arc-over at the ceramic insulator.

<sup>e</sup> High speed "fault" protection must be used with all grid-pulsed applications and with all plate-pulsed applications where the pulse length exceeds 20 microseconds.

f The magnitude of any spike on the grid-No.2 voltage pulse should not exceed its peak value by more than 250 volts, and the duration of any spike when measured at the peak-value level should not exceed 10% of the maximum "ON" time.

g A negative dc voltage of 300 volts maximum may be applied to grid No.2 to prevent any tube conduction between pulses.

h The grid-No.1 voltage may be a combination of fixed and self bias obtained from a series grid resistor.
