⊕ Subscript 1 indicates that grid-No.1 current does not flow during any part of the input cycle.

• Continuous Commercial Service

* Averaged over any audio-frequency cycle of sine-wave form.

⊕ Obtained from a fixed supply.

★ Total effective grid-No.1-circuit resistance should not exceed 0.15 megohm.

↓ Subscript 2 indicates that grid-No.1 current flows during some part of input cycle.

** Obtained from fixed supply having dc resistance not exceeding 250 ohms.

•• Driver stage should be capable of supplying the No.1 grids of the class AB₂ stage with the specified driving power at low distortion. The effective resistance per grid-No.1 circuit of the AB₂ stage should be held at a low value.

⊕⊕ At crest of audio-frequency cycle with modulation factor of 1.0.

▲ Obtained preferably from a separate source modulated along with the plate supply, or from the modulated plate supply through a series resistor.

♦ Key-down conditions per tube without amplitude modulation. Amplitude modulation essentially negative may be used if the positive peak of the audio-frequency envelope does not exceed 115% of the carrier conditions.
