^a Made by Cleveland Electronics Inc., 1974 East 61st Street, Cleveland, Ohio,

^b Made by Cinch Manufacturing Company, 1026 South Homan Avenue, Chicago 24, Illinois.

^c The suppressor grid connected to the cathode and the field-mesh grid connected to grid No.4 are not given as numbered grids in order to conform with industry practice of associating functional camera control knobs with specific grid numbers. For example, beam-focus control is generally associated with knob identified as G4 (grid No.4), regardless of its position with respect to the cathode.

^d Dynode-voltage values are shown under *Typical Operating Values*.

^e With 8092A operated in RCA-TK-11 or -TK-31 camera. Other cameras may require slightly different voltage ranges.

^f Adjust for best focus.

^g Normal setting of target voltage is +2 volts from target cutoff. The target supply voltage should be adjustable from -3 to 5 volts.

^h Adjust to give the most uniformly shaded picture near maximum signal.

^j Direction of current should be such that a north-seeking pole is attracted to the image end of the focusing coil, with indicator located outside of and at the image end of the focusing coil.

^k Measured with amplifier having flat frequency response.
