

KLYSTRON

A water-cooled two resonator low noise rugged Klystron Power Amplifier with a gain of 10dB intended for C.W. operation. It is designed to be driven by an oscillator type SZ22, under which condition the power output will be in the range 150-200 W. The valve has rugged tuners with a ± 20 Mc/s. tuning range which is intended to be used for tuning the cavities to match any SZ22.

PHYSICAL DETAILS.

Max. Overall Length	7.25" (184.5 mm.).
Max. Overall Width	4.314" (109.5 mm.).
For other dimensions see outline drawing on Page 3.			
Output Waveguide	WG16 coupling to
Input Waveguide	1 I.S.S. choke flanges
Water Connections	$\frac{1}{8}$ " B.S.P. Unions.

HEATER.

Heater Power	20 to 27 Watts.
Heater Resistance	at 23.5 watts. ... 2.35 to 2.65 Ohms.
Cold Heater Resistance	0.2 Ohms.
Max. switch-on surge current	9 Amps.

RATINGS.

Max. Beam Voltage	10.0 kV.
Max. Beam Current	260 mA.
Max. Focus Voltage	50 volts.

FREQUENCY.

† Operating Frequency	9500 Mc/s.
Tuning Range	± 20 Mc/s.

WATER COOLING.

‡ Minimum Water flow at 20°C...	1.0 Litre/min.
---------------------------------	----------------

TYPICAL OPERATION AND CHARACTERISTICS.

Beam Voltage	8	kV.
Beam Current	150	mA.
Focus Voltage	-25	volts.
Efficiency	17	%
R.F. Gain	...	High Level	10	dB.
	...	Low level	14	dB.
Input Power	15	25 watts.
§ Output Power	175	200 watts.

NOTES ON OPERATION.

1. It is recommended that a pressure type water flow relay should be fitted in the drain pipe, in order to break the H.T. supply in the event of cooling water supply failure, otherwise the beam will rapidly puncture the collector if such a failure occurs.
2. Care should be taken not to exceed 2:1 V.S.W.R. in the output circuit, otherwise the output window may puncture.
3. To avoid internal damage to the cathode or focus electrode in the event of flashover when the valve is first run, the focus electrode to cathode potential should be limited in the event of breakdown to less than 500 volts. This can be readily achieved by series connected neon discharge tubes across the focus electrode supply.

*Over the operating heater power range the heater resistance R series with the heater power W according to the law $R \propto \sqrt{W}$.

† Valves can be supplied tuned to any "X" band frequency by arrangement.

‡ Water input must be to collector end union.

§ At 9500 Mc/s.

Bandwidth: to 3 dB points—18.5 Mc/s.
to 1 dB points—10 Mc/s.

TYPICAL RF INPUT/OUTPUT CHARACTERISTICS.
