

MINIATURE OUTPUT PENTODE 6.3V INDIRECTLY HEATED

A2134
MARCH, 1955

The A2134 is the commercial equivalent of CV2179.

It is particularly suitable for use as the series valve in voltage stabilising equipment.

BASE CONNECTIONS AND VALVE DIMENSIONS

View from underside of base.

Base : B7G
Bulb : Tubular

Overall length : 64—70 mm.
Seated length : 58—64 mm.
Max. diameter : 19 mm.

The conditions given in the last two columns are those obtained when the valve is over-biased. They are useful when H.T. power is limited and reduced power output can be tolerated.

GRID RESISTOR

The maximum permissible D.C. resistance from control grid to cathode is limited to 0.27 MΩ ± 20% for auto-bias and 0.1 MΩ for fixed bias applications.

SCREENING

No internal or external screening is fitted to the valve.

MOUNTING

Any position.

RETAINING

The use of a retaining device is recommended.

VENTILATION

Free air circulation around the bulb is preferable. If a retaining device in the form of a canister is employed, the surfaces should be blackened. The temperature of the hottest part of the bulb must not exceed 250°C.

MICROPHONY

Free from microphony in all normal receiver applications.
