CIRCUIT VALUES

Grid Circuit Resistance	1.5 Megohms Max.
Deflection Circuit Resistance ⁷	1.0 Megohms Max.

NOTES:

1. Operation of Type 3AQP7 at Anode Voltages of less than 1000 volts is not recommended.
2. Visual extinction of undeflected focused spot.
3. Deflecting Plates 1-2 are nearer the screen.
4. Deflecting Plates 3-4 are nearer the base.
5. Useful scan to be centered with respect to the tube face.
6. With the tube shielded and all deflection plates connected to Anode No. 2. Limit square centered on tube face, with sides parallel to deflection axes.
7. The resistances in each deflecting plate circuit should be approximately equal.
