NOTES:

1. Sockets are available from Sylvania Electric Products Inc., 1035 Westminster, Williamsport, Pennsylvania. (Part No. 70-780-1)
2. A value for the anode resistor can be computed by subtracting the nominal tube drop from the supply voltage and dividing the remainder by the desired operating current.
3. Two separate pulses, back to back or with slight overlap, must be maintained.
4. The peak pulse output voltage can be determined by the IR drop across the chosen cathode resistor.
5. A counter tube brochure is available on request from Sylvania Electric Products Inc., 1100 Main Street, Buffalo 9, New York.

QUICK REFERENCE DATA

The Type 8353 is a cold cathode, bidirectional decade counter tube with top viewed readout. It is designed to operate at inputs up to 4000 pulses per second. All 10 cathodes are brought out to individual base pins. Applications include computing, scaling, counting, frequency dividing, coding, modulating, matrixing, indexing, multiplexing, addition and subtraction. (See Note 5.)
