

NUMERICAL INDICATOR**engineering data report****6844****(NIXIE*)(HB-106)**

The 6844 is a gas-filled, cold cathode, 10-digit ("0" through "9"), numerical indicator tube, having a common anode. It features a suppressor screen to minimize darkening of the viewing dome. It is intended for use as a direct, in-line, read-out device.

Average.....	2.2 MA Max.
Individual Cathode Warrtage.....	0.38 Watts Max.

2. TEST CONDITIONS (See Typical Circuit)

Anode Supply Voltage.....	170 Vdc
Anode Series Resistor.....	15K ohms
Anode Current.....	1.0 MA Min. - 2.2 MA Max.

TYPICAL CIRCUIT**NOTES**

1. The tube socket is oriented with respect to the viewing position so that A—A¹, intersecting the center of Pins 1 and 8 is vertical with Pin 8 on top. This orients the numerals in the correct vertical position. The numbers are viewed through the top of the tube.
2. From +30°C to +70°C, no significant change in cath-

ode current occurs. From +30°C to -65°C an increase in cathode current (Up to 50%) may be expected.

3. It is recommended that the cathode current be kept at its lowest possible value for complete numeral glow in order to obtain maximum life.
4. HSK-112 available early 1957.
