Connections
- Filament and Grid: Metal super jumbo 4-pin base #4310
- Anode: C1-5 cap at top (0.56" dia.) with skirt

The filament must be lit before drawing d-c. load current.
The anode is designed to operate at red heat when under full load. All of the above values are for returns to the filament transformer center tap. Filament pin #3 should be negative with respect to pin #2 during the anode conduction period.
The Engineering Manual contains additional information which should be considered in the circuit design.
